I replay that hand in my head, from time-to-time, and always pause at the moment when the dealer taps the 9 table, right before she flips the river card up. I glance one more time at the board: Kc Jc 8h 9 5c.

“Ace, Queen, Ten, Club,” I hear my section of the rail shouting.

It didn't come.

It's been a decade since the river 9 blanked off, but it still feels like yesterday. I don't compete in tournaments often, so I still haven't got the 9 chance to rewrite that history with a different result.

The truth is, unless you grind the circuit full time, play small 9 field high-rollers, or, frankly, are on the positive side of variance more than your fair share, you may not either.

It's 9 something I

understood conceptually as a professional, but until I lived it, I couldn't fully grasp the nature of tournaments, 9 and to a larger extent, poker in general.

It's not just

winning your coin flips, where one experiences the luck. Variance 9 comes in many forms in poker: You may get coolered with the second nuts to the nuts, or your opponent 9 may draw out on you.

But variance also comes in hidden forms: a bad turn card that kills your action; or 9 positional variance, such as getting aces under the gun instead of on the button; or situational variance, by merely being 9 in the right place at the right time to get into a great game, which earns you a fortune.

While these 9 things will, in

theory, even out over the long run, poker players, too often, don't realize just how long that 9 long run is. In the meantime, they go broke in the name of expectation, never

reaching the point where their 9 skill trumps the luck.

Just how long does it take?

In a

sentence, much longer than you think.

In tournament poker, evening out 9 the variance can take a lifetime or two.

This explains the phenomenon of how the world's best players can go years 9 without winning a major event. Conversely, there will always be a fortunate few who go on to win multiple events 9 in a short period of time.

Most people

will associate this hot streak solely with skill; when, in fact, luck was 9 the principle contributor to someone winning on any given day.

This is not to say that all successful

tournament professionals are 9 merely benefactors of good fortune; some are truly phenomenal players. But it's important to remember that for every one superstar, 9 there are likely 100 players of equal caliber who just haven't caught the right breaks, never won an event, and 9 thus never had the opportunity to further pursue their tournament career.

This harsh reality doesn't mean that winners are good, and 9 losers are bad, or that there's no skill for those who win. It just means that luck supersedes everything else, 9 in the short term, which as you'll see in a moment, isn't all that short.

But

just when you want to 9 curse your fortune, blaming bad luck for your losses, remember this one thing. Poker is unique in that it's the 9 most competitively played game where luck plays a significant factor in the final outcome (other sports have variance—the best football 9 team doesn't always win—but it's much less significant than in poker).

And thank God for it.

As Phil Hellmuth famously states, "If 9 there were no luck involved, I'd win every time." Some may question his assurance, but the implications of his idea 9 are telling. No professional truly wishes there were less luck involved. If there were, poker would be like chess and 9 the action would dry up.

You may be thinking

I'm exaggerating, and that luck really isn't as big of a factor 9 as I make it out to be.

Well, let's look at what the math says. I love numbers, because they 9 never lie.

Here is

a simple variance calculator program that I use to get a grip on just how profound the 9 role of luck is in poker tournaments.
